Delivery Pipeline Canvas

Map how a change gets from a developer's commit to customers, find where it waits or fails, and pick the next fix.

Engineering Practices · Continuous Integration & Delivery · Inspired by Continuous Delivery (Humble & Farley)

TEAM / SYSTEM _____

DATE _____

1 Pipeline Stages

FROM COMMIT TO CUSTOMER · ADD OR RENAME STAGES TO MATCH YOURS

Commit & review
Merge to main, peer review

Time: _____
Waits before: _____
Fails: _____
Manual steps: _____
Gate: _____
Tool: _____
Owner: _____

Build
Compile, package, version

Time: _____
Waits before: _____
Fails: _____
Manual steps: _____
Gate: _____
Tool: _____
Owner: _____

Automated tests
Unit, integration, end-to-end

Time: _____
Waits before: _____
Fails: _____
Manual steps: _____
Gate: _____
Tool: _____
Owner: _____

Quality & security
Scans, checks, approvals

Time: _____
Waits before: _____
Fails: _____
Manual steps: _____
Gate: _____
Tool: _____
Owner: _____

Deploy to test
Staging or pre-production

Time: _____
Waits before: _____
Fails: _____
Manual steps: _____
Gate: _____
Tool: _____
Owner: _____

Release
Production, to users

Time: _____
Waits before: _____
Fails: _____
Manual steps: _____
Gate: _____
Tool: _____
Owner: _____

Monitor
Is it working for users?

Time: _____
Waits before: _____
Fails: _____
Manual steps: _____
Gate: _____
Tool: _____
Owner: _____

2 Totals & Signals

THE WHOLE PIPELINE

Commit to production, typical: _____
Time to fix a broken build: _____
Of that, time spent waiting: _____
Flaky or skipped steps: _____
Pipeline runs per day: _____
Deploys per week: _____
Runs that fail: _____
Releases rolled back: _____

Fast feedback matters most: aim for a build and test run that finishes in minutes, not hours.

3 Bottlenecks & Pain

WHERE DOES WORK WAIT, FAIL OR NEED A PERSON?

Add your sticky notes here

4 Next Improvement

ONE CHANGE AT A TIME

The change we'll make: _____
Expected effect (which number moves?): _____
Owner: _____
Check it on: _____

5 Signals of a Healthy Pipeline

TICK WHAT'S TRUE TODAY

- [ ] Every change goes through the same pipeline
- [ ] Main is always releasable
- [ ] A broken build is fixed first
- [ ] Tests and config live in version control
- [ ] Deploying is one click, or none
- [ ] We can roll back in minutes

"Where does a change spend most of its time waiting?"

"What would it take to release any day we choose?"
